

SchoolMSDS

FEATURES and BENEFITS

Virtual MSDS Binders Stored Online

SchoolMSDS will store electronic versions of every MSDS in your district, allowing you to build virtual binders for each work area. Having your chemical inventory lists and MSDS binders stored electronically will simplify the ongoing updating and tracking that needs to be done.

Create Neatly Organized Physical Binders

Once you have your virtual MSDS binders created, all it takes is a few clicks to print out neatly organized physical versions of your MSDS binders. You can create binders that have MSDSs for every chemical in the entire district, building, or individual work area.

Remote Access to MSDSs

It's common to have people in the district who work in several areas throughout the day, and having virtual binders offers continual access to your MSDSs no matter where you might be.

"Facility Tree" Chemical Organization

A unique feature found in SchoolMSDS is the ability to build a "facility tree," which organizes your chemical inventory by work area. This means you can build specific MSDS binders for each work area in the district, which is extremely helpful when you need to find the right MSDS as fast as possible.

Search and Retrieve MSDSs

Our search and retrieve tool will help you find any MSDSs that you don't already have. Our vast database of MSDSs can be searched by chemical name, company, distributor, ingredients, and more!

Repository of Common School Chemicals/MSDSs

As the SchoolMSDS family grows, this repository of chemicals will grow with it. Over time, we will build comprehensive lists of chemicals, MSDSs, and distributors that are commonly used by school districts. Common chemical lists by work area will give customers a head start on building virtual binders.

“Having electronic versions of your MSDS binders makes it so easy to update and organize the chemical inventory throughout the entire district.”
